

BULLETIN 755

1974 INSPECTIONS OF

**FERTILIZER
PESTICIDE
AND FEED
PRODUCTS**

J. Gordon Hanna

THE CONNECTICUT AGRICULTURAL EXPERIMENT STATION • NEW HAVEN

1974 Inspections of
Fertilizer, Pesticide and Feed Products

This report contains data obtained by the chemical analysis of officially collected samples of commercial feeds, fertilizers and pesticide formulations. Tables are presented showing the number of samples from each manufacturer (in parenthesis), the number of determinations made for each guaranteed ingredient, the number of deficiencies and the average percent of claims for each component. A table of the tonnage of fertilizers sold during the period between July 1, 1973 and June 30, 1974 is included.

The deficiencies noted for feed samples are based on tolerances of 0.75% for protein and fiber, 0.25% for fat, and 20% of the guarantee for medicants. The investigational allowances for fertilizers are those of the Association of American Plant Food Control Officials, and the permissive guarantee variations suggested by the Association of American Pesticide Control Officials are used for pesticide formulations.

Data for 542 samples of feeds representing 76 manufacturers, 771 samples of fertilizers representing 96 manufacturers and 313 samples of pesticides representing 54 manufacturers are summarized.

The feed statute is administered by the Commissioner of Agriculture. The fertilizer law was administered by the Station Director until July 1, 1974 and since that time by the Commissioner of Agriculture. The pesticide law is under the direction of the Commissioner of Environmental Protection.

Analytical work was by R. Botsford, M. Fuzesi, W. Glowa, H. Kocba, R. Smith, S. Squires and G. Wilmes. Sample collection was by R. Campbell and R. Nichols. The report was assembled and typed by A. Ballou.

J. Gordon Hanna, Chief Chemist

March 1975
